940

950

Bag sealing with RIPACK® heat shrink tool *

Multicover 940 or 950 allows the operator to make any size pallet covers and bags from rolls of film tubing.

Multicover 940 or 950 requires the use of a RIPACK® heat shrink tool to do the sealing operation.

Using Multicover 940 or 950 is easy

■ after sealing the top or the side of the pack depending on the type of film used (gusseted, pre-folded...), it is unrolled to the required length and then cut.

■ A front “T” stand (170 cm length, 67 inches) allows measuring of the film to the necessary length and holds the prepared bags (not available on Multicover 940).

■ The film cut is made with a manual cutter on Multicover 940 and with a manual sliding blade on Multicover 950.

The two reels dispenser Multicover 9503* allows using up to 3 reels simultaneously ■ with the casters as standard, the set becomes completely mobile. (casters not available on Multicover 940).

Type	Multicover 940	Multicover 950
Sealing process	RIPACK® heat shrink tool *	
Manual cut process	Knife or scissors	Blade on sliding carriage
