

Optimum load stabilising

Hold the cover under the pallet corners thanks to the **CALPACK** raiser

Quick and easy to set up, the CALPACK allows the film to shrink under the pallet. The load is thus perfectly stabilised with the pallet.

CALPACK can be used as well with a pallet-truck or a fork-lift.

For optimal load holding

- the height is designed for the cover to be perfectly tucked under all four corners of the pallet.
- an Ertalon caster ensures handiness.
- CALPACK is designed for 800 x 1200 mm pallet size.
- it is supplied with standard wideners for pallets of 1000 x 1200 mm / 40" x 40" / 40" x 48".
